

GuideXP TechLauncher Group Meeting Minutes

Meeting No. 8
5:05pm, CSIT
March 20, 2019

Attendees:

Liang Hong	u6303287
Rutai Sun	u6227336
Danny Feng	u6611178
Yuanze Niu	u6401780
Yu Qiu	u6063921
Kelin Zhu	u5746358

Agenda:

- 1): Summarize the suggestions that we have got from the tutor.
- 2): Analyze the current progress of our project.
- 3): Test the server that our client had provided for us.
- 4): Gathering questions that we are currently facing.

Discussions

During the discussion, we first review the feedback of our Audit presentation, recognize the mistakes that we had made about the less content, and try to avoid this on the next Audit presentation. We also summarize the suggestions that we have got from the tutor. We concluded a more clearly design diagram and plan to investigate a gallery this weekend for real experience and more information.

Then, we analyze the current progress of our project. We already chosen and start learning the techniques that we will be used for the project. We decided to use Django for the framework and React.js for the user interface, and we planned to use MongoDB for our Database, we also come up with the idea about data structure about storing different kinds of data in the database.

However, when we have a look at the server that our client had provided for us, we realize that Hosting Manager can only use MySQL, which means if we want to use MongoDB, we might need use our own server. After a deep discovering of the server, we find out that the server that they provide for us is not the kind that suitable for our project design, because we are not able to install the techniques on the server. Initially, we decide to switch server, according to our real situation.

Except the server problem, we also find out we have some problems about team roles and the IP agreement.
